

## Setting up WebDAV for use with your MSU WebCT course:

WebDav allows you to view, manage, move, copy, save and rename the files and folders that exist in your course on the MSU WebCT server just as you would while working locally. WebDAV requires that the designer's local computer(s) be configured for it. To utilize WebDav, you must first create a network folder on your local machine that connects to your course located on the MSU WebCT server.

### MacOS 9

If you are using MacOS 9 you will need a WebDAV client such as Macromedia's Dreamweaver or the freeware Goliath.

1. From your myWebCT, click the WebDAV info link. The WebDAV Info page appears.
2. From your WebDAV info page, select the URL for the course and folder you want local access to: Course Files or Course Backups.
3. Copy the URL. **Note:** The URL will begin with http://
4. If you are using the Goliath client, click the menu "FILE > NEW CONNECTION". If you are using a different client, specific steps may differ.
5. Paste the URL that you copied in step 3 in the URL field. Click the "Use Basic Authentication" checkbox and enter your MSU WebCT ID and Password in the fields provided. Click "OK".
6. Your directory will now be mounted on your desktop.
